

Assignment-3.2

Name:N.Sushanth Reddy

Hallticket:2303A51118

1)

Code:

```
def calculator():
```

```
    print("Simple Calculator")
```

```
    while True:
```

```
        # Input numbers with error handling
```

```
        try:
```

```
            num1 = float(input("Enter first number: "))
```

```
            num2 = float(input("Enter second number: "))
```

```
        except ValueError:
```

```
            print("Error: Please enter a valid number.")
```

```
            continue
```

```
        # Input operator
```

```
        operator = input("Enter operator (+, -, *, /): ").strip()
```

```
        # Perform calculation
```

```
        if operator == '+':
```

```
            result = num1 + num2
```

```
        elif operator == '-':
```

```
            result = num1 - num2
```

```
elif operator == '*':
    result = num1 * num2
elif operator == '/':
    if num2 != 0:
        result = num1 / num2
    else:
        print("Error: Division by zero is not allowed.")
        continue
else:
    print("Error: Invalid operator.")
    continue
print(f"Result: {result}")
# Ask if the user wants to continue
again = input("Do you want to perform another calculation?
(y/n): ").strip().lower()
if again != 'y':
    print("Goodbye!")
    break
# Run the calculator
calculator()
```

Output:

```
/ai_coding/New folder/ass_3.py"
Simple Calculator
Enter first number: 2
Enter second number: 3
Enter operator (+, -, *, /): +
Result: 5.0
Do you want to perform another calculation? (y/n): n
Goodbye!
```

2)

Code:

```
def sort_students(students):
    # Sort by marks (descending), then by name (ascending)
    return sorted(students, key=lambda x: (-x[1], x[0]))
